### Overview

PackageConsole is a WPF-based internal tool designed for automating application packaging, INI editing, deployment testing, and managing post-configuration steps. It is structured with a modular, page-based navigation system and supports detailed logging and reporting.

#### **Features**

- Home Page: Tile-based navigation to launch utility tools.
- Add Package: Form-based UI to upload, extract metadata, and structure application files.
- INI Console Page: Dynamic INI file viewer/editor with merging and undo.
- Postconfig: Allows advanced customization of INI sections and values.
- Testing Page: Automatically generates install/uninstall commands and runs them via Task Scheduler.
- App Deployment Test: Captures pre/post deployment snapshots and produces a full report.
- Previous Apps: Loads historical INI files and allows re-editing or exporting.
- Feedback Page: Submit ideas, bugs, or feature requests with optional screenshots.

### **Folder Structure**

Packages are created under:

 $C:\label{lem:console} C:\label{lem:console} C:\label{lem:console$ 

Files\

SupportFiles\

tmpPackage.ini (auto-generated or merged file)

## **INI File Operations**

- INI files are parsed and dynamically edited using a custom INI context interface.
- Supports merging tmpPackage.ini with base Package.ini.
- Undo and export options available in editor and PreviousApps page.

# **Deployment Testing**

- Automatically determines package type (MSI, MST, PSADTK).
- Uses Windows Task Scheduler to run install/uninstall as SYSTEM.
- Captures pre and post snapshots, generates HTML reports and TSV files.

# Logging

- Application-level logs are recorded using NLog.
- Deployment test logs are streamed to a RichTextBox with color coding.
- Logs stored in C:\Logs and support detailed diagnostics.

# **Admin Controls**

- Feedback Page shows admin-only controls for users: sankara, venkat, archana, Dell.
- Admins can update responses to feedback directly in the app.

### **Future Enhancements**

- Cloud sync for remote packaging.
- Central INI versioning system.
- Role-based user access.
- Live validation for INI sections before merging.
